AutoCAD is used by more than 10 million users worldwide. More than 400 new features have been added to AutoCAD since the version release in 2015, many of which address some of the needs of architects, interior designers, engineers, and artists. AutoCAD (and the AutoCAD Technical Resources Center) provides the following resources for the home user: • User documentation (videos, online tutorials, and webinars) • Tutorials and sample projects • Add-ons and third-party programs for AutoCAD and AutoCAD LT • Tools and add-ons for AutoCAD • Support • Partner and product resources • Software archives and tutorials • Education services (CAD University) • Training (edX and Open University) • Workshops • Online training with courses and lectures • Contests and online awards • User groups • AutoCAD Community • Support forums and help AutoCAD History AutoCAD is a brand of the Autodesk software division. The first version of AutoCAD was released in December 1982. AutoCAD is the industry standard for 2D CAD systems. The AutoCAD name was first registered as AutoCAD in 1986 (the number is assigned by Autodesk). AutoCAD was the first in a series of software titles that came to be known as the Autodesk Software Suite. AutoCAD was preceded by the first release of the Autodesk DTP Suite for 1983. The AutoCAD name was not used by Autodesk until the third release of the AutoCAD software suite in 1987. The first versions of AutoCAD were called AutoCAD R16, and were limited to very specific design work on paper. In 1986, when AutoCAD R16 was introduced, the programs were installed on personal computers using the RTP (relay transfer protocol) programming language. The first AutoCAD release, the AutoCAD R16, can be traced back to January 1986. In 1987, the first truly 3D version, AutoCAD LT, was introduced. AutoCAD LT is a design and drafting tool that enables users to create 2D drawings (2D drawings include rectangles, circles, and lines) as well as 3D models. The first release of AutoCAD LT

I have tried using the following code but it is not working. $("#list").attr("id", "list1"); My HTML is as follows: foo bar baz bar foo foo A: $("#list").attr("id", "list1"); $("#list").attr("class", "test"); Works fine. The class will just have the default css applied to it. You can also add CSS styles via class names. The ID must be unique in a document. You can give a class name that has more than one word to give it a more descriptive name. The ID is used to tie a jQuery command to a specific element.
