AutoCAD is a computer-aided design (CAD) and drafting program. It enables users to create complex 2D and 3D models by assembling pieces of paper or plastic. If you have a drawing from your previous project, you can simply import it into AutoCAD. If you are new to AutoCAD, you can start by creating an initial drawing and then add other drawings into it as needed. Once you finish, you can save your drawings to the hard drive, CD-ROM, or floppy disk, or email your drawings. AutoCAD is used to develop and design mechanical and architectural systems. Architects and other professionals use it for creating 2D and 3D models to visualize their designs. Engineers use it to create and modify drawings of mechanical, architectural, and industrial systems. AutoCAD is a desktop-based application that runs on a personal computer. It is available as a standard Windows program and as an iPhone/iPad app. The mobile version can be used to edit drawings that have been saved to the phone's internal memory. I had always assumed that the repl and the script were running in parallel. This makes more sense, but it's still interesting how he was able to completely hide the repl inside the user's browser. ~~~ brayon This was pretty much my setup for the last 8 or so years. At least since when I was working on Joy (www.joy.clojure.org). I'm now working on a production Clojure script (also written in Clojure) hosted on Heroku. This has made things pretty different though. Q: Remove row from a JTable I have a simple JTable, which gets populated using a DefaultTableModel. In the model, there's a column with an image. On button click, a dialog appears, and user can upload an image and replace the currently displayed one. Is there a way to remove the row, so that the image gets deleted? I'm using Netbeans. A: If your DefaultTableModel has a reference to the object that is being displayed, then you can remove it from that reference and the model will discard the entry. The example below is for a model with a String and a String. In this case, you would remove the String that represents the image from the model and it will be removed from the table. import java.awt.BorderLayout; import java.awt.event.ActionEvent; import java.awt.event.ActionListener; import java.util.HashMap; import java.util.Map; import java
