I'm trying to figure out a way to log these numbers in to the Access database so I can pull the data and populate a custom report. I'm wondering if Access can do this with a field. I'd have all the data stored in an Access table, with a field of either Count, or ReviewID. I'm also not sure how to reference the Review table with Access. If I create a view in MS SQL, how can I relate this to the data access? I'm stumped on this. I do have some experience with Access and SQL, so I am going to have to stay a little current.
