Thus, while we see a common trend, there is no evidence that simple words are measurably harder to memorize than more complex words. Recall takes place in the hippocampus, an anatomical area of the brain that is implicated in learning, and, more specifically, memory, as well as being the key region in seizure disorders. Research has shown that healthy adults are able to accurately recognize a simple image in their hippocampus using functional MRI (fMRI). In particular, portions of the hippocampus are activated when a person first encounters an image, and the image remains in the hippocampus for a brief period after that. This means that the brain is actually recording what the individual is currently looking at. While this may seem like an advanced type of neuro-vision, this is actually quite common. A significant number of people, including me, wear glasses or contact lenses that require frequent polishing, and this can
