How to print data on console using mongodb in django? I am creating a simple project using django and mongodb. So, I wrote this code for models.py: import datetime class name_admin(models.Model): name = models.CharField(max_length=100) date = models.DateTimeField() location = models.CharField(max_length=100) I have a view.py code where I write like this: def admin(request): print 'hello' a = name_admin.objects.all() print a return render(request, 'index.html') This prints nothing on the console, but if I write 'hello' in a html file and run it then it prints 'hello' on the console. So, how to print on console data from mongodb? A: You will need to use a library for querying MongoDB. The default SQLAlchemy can be used for this. import datetime from pymongo import Connection from sqlalchemy import create_engine engine = create_engine('mongodb://localhost:27017/test') connection = Connection(engine) class name_admin(models.Model): name = models.CharField(max_length=100) date = models.DateTimeField() location = models.CharField(max_length=100) admin = name_admin() print admin.name print admin.date print admin.location This invention relates to thermoplastic compositions,
